Princess

BEAUTY SALON

Admin Control Manual

How to run the salon from the staff portal — bookings, money, stock, people and the public website.

Staff portal · **/admin/login.php**

Version 1.0 · September 2026

Contents

1 Signing in — accounts, lockout, sessions

2 Who can see what — the four roles

3 The dashboard — your morning screen

4 Appointments — order, status, payment, receipts

5 Clients — profiles and history

6 Services — catalogue and pricing

7 Staff — the team and commission

8 Inventory & the counter — stock and retail sales

9 Revenue & reports — what the salon made

10 Expenses — what the salon spent

11 Users & access — logins and roles

12 Settings — the six tabs

13 Notifications — alerts and messages

14 My Profile — your own account

15 The stylist portal — what a chair sees

16 Photos & the gallery — publishing pictures

17 Daily, weekly, monthly — routine checklists

18 When something looks wrong — troubleshooting

CHAPTER ONE

Signing in

The staff portal is a separate door from the public website. Clients never see it, and it is guarded on the server — not just hidden from the menu.

The address

`http://localhost/beautybooking/admin/login.php`

On a live server this becomes your own domain followed by `/admin/login.php`. The public site sits at the root and links nowhere near it.

The accounts that ship with the system

Every seeded account uses the password `demo1234`. Change these before the salon opens for real business.

EMAIL	PERSON	ROLE
`aicha@princessbeautysalon.cm`	Aïcha Ngo	Owner / Admin
`pauline.manager@princessbeautysalon.cm`	Pauline Nji	Manager *(suspended)*
`reception@princessbeautysalon.cm`	Estelle Manga	Receptionist
`blessing@princessbeautysalon.cm`	Blessing Etonde	Staff / Stylist
`grace@ · linda@ · marcel@`	the other stylists	Staff / Stylist
`sandra@princessbeautysalon.cm`	Sandra Ekwe	Stylist *(invited)*

> **Two of these cannot log in, deliberately.** Pauline's account is *suspended* and is refused with "This account is suspended. Speak to the owner." Sandra's is *invited* — she exists in the diary but has never set up a login. Both are there to show you what those states look like.

The login screen itself

Below the form is a **Demo accounts** list. Clicking a name fills the email in for you. It is a convenience for testing; remove it before going live.

Lockout

Five failed attempts from the same computer locks that computer out for **15 minutes**. A much larger number of failures from anywhere at all trips a wider block, so nobody can grind through passwords from a dozen machines. A *successful* login clears the counter, so a colleague who simply mistyped is not left counting down.

Staying signed in

- You are signed out automatically after **two hours** of doing nothing.
- **Keep me signed in** on the login form extends that on your own device.
- If the owner suspends your account while you are working, your session is dropped on your very next click.
- Signing out is a button, not a link — so no other website can sign you out behind your back.

CHAPTER TWO

Who can see what

Four roles ship with the system. The role decides which pages appear in the sidebar *and* which pages will open at all.

PAGE	OWNER	MANAGER	RECEPTION	STYLIST
Dashboard	✓	✓	✓	✓
Appointments	✓	✓	✓	—
Clients	✓	✓	✓	—
Services	✓	✓	—	—
Staff	✓	✓	—	—
Revenue & reports	✓	✓	—	—
Expenses	✓	✓	—	—
Inventory & store	✓	✓	✓	—
Users	✓	—	—	—
Settings	✓	—	—	—
My Schedule / Clients / Performance	✓	—	—	✓

> **Hiding a menu item is not security, and the system knows it.** If someone types the address of a page they are not allowed, they are turned around and sent back to the dashboard — and the attempt is written to the activity log as a security event. The check happens on the server, before the page is built.

Two things worth understanding

A stylist's diary is filtered, not blurred

When a stylist opens anything, the database query itself is narrowed to their own chair. They are not seeing the whole salon with other people's rows hidden by styling — the other rows are never fetched.

Users are not the same as staff

Staff are people with a chair and a craft. **Users** are logins. A receptionist has a login and no chair; a stylist can exist in the diary for weeks before anyone gives her a password. The Users page is where the two are tied together.

CHAPTER THREE

The dashboard

The screen you land on. What it shows depends on your role.

If you are the owner or a manager

- **Today's Revenue**, **This Week**, **This Month** and **Net Profit (Month)** across the top.
- **Revenue trend** — daily gross for the last 14 days.
- **Today at a glance** and today's appointments in chronological order.
- **Top services** and **top stylists** by revenue this month.
- **Low stock alerts** — anything at or below its reorder level.
- **Business health** — the summary block at the foot.

If you are a stylist

The money blocks are not merely hidden — they are never put on the page. You see **My Appointments Today**, **My Appointments This Month**, **My Rating** and **Next Appointment**.

> **Read it in this order each morning:** today's appointments first, then low stock, then the revenue trend. The first tells you what the day looks like, the second is the only thing you cannot fix later in the day, and the third is context rather than an action.

CHAPTER FOUR

Appointments

The busiest page in the system. It is both the diary and the till.

Finding the booking you want

Four filters sit above the table and combine freely:

Status	Pending, confirmed, completed, cancelled, no-show — with a live count on each.
When	Today, upcoming, past, or **unpaid**.
Stylist	Whose chair. Stylists do not get this filter — they only ever see their own.
Search	Client name, phone number, or the booking reference such as `PBS-4821`.

There are two views — **list** and **calendar**. The list is paged at 25 bookings to a page; the calendar shows the current month as a grid.

The order the list comes in

A row of **Order by** chips sits above the table. The default is **Submitted — newest day first, then A–Z**: bookings are grouped by the day they arrived, and within each day the clients are listed alphabetically. Each row shows its submission date under the reference, so the grouping is visible rather than something you have to take on trust.

Submitted — newest day first	What came in today, then yesterday. The default.
Submitted — oldest day first	Queue order: the longest-waiting request first.
Appointment date — latest first	By the day of the service, not the booking.
Appointment date — earliest first	Read forward through the diary.
Client name — A to Z	Straight alphabetical, ignoring dates.

> **Why group by day rather than exact time?** Because the alphabetical part has to be able to do something. No two bookings share a second, so sorting on the raw timestamp would mean the name never breaks a tie. Grouping by the day the booking arrived is what makes "then A–Z" real.

Your choice is carried through the filters, the search and the pager, so you can sort once and keep working.

Moving a booking through its life

A booking starts **pending** when a client books online. From there:

1. **Confirmed** — you have spoken to the client, or you are simply happy the slot is real.
2. **Completed** — the work has been done. This is the important one.
3. **Cancelled** or **no-show** — the client is not coming.

> **Completing an appointment is not just a label.** In one single, indivisible step it banks the revenue and deducts every product the services consume from stock. Because of that, the system enforces two rules:
>
> - You **cannot complete an appointment dated in the future**. It refuses with the date, so today's takings never include tomorrow's work.
> - You **cannot reopen a completed appointment**. Reverse the payment instead — an audit trail is worth more than a tidy screen.

Taking payment

1. Open the appointment.
2. Choose the method — **cash**, **MTN MoMo**, **Orange Money** or **card**.
3. Add any **add-ons** sold at the chair and a **tip** if there was one.
4. Save. The grand total is the service total plus add-ons plus tip, and the moment of payment is stamped.

Anything completed but never paid turns up under the **unpaid** filter and on the outstanding report — which is exactly where you want it.

The receipt

Every appointment has a printable receipt. There are three ways to it, and you should almost never need the third:

- **It opens by itself when you take payment.** The moment the payment is recorded the receipt appears in a new tab with the print dialog already up — while the client is still standing at the counter.
- The **Receipt** button on any row in the appointments table.
- The **Receipt** button inside the appointment's detail panel.

What is on it

The salon's name, address and phone from Settings; the booking reference; the date and time of the service; the client and their phone; the stylist; every service itemised with its price; add-ons and tip as separate lines; the total; the payment method; and a **paid in full** or **payment outstanding** stamp. If a deposit was taken online it is subtracted and the balance shown on its own line.

Printing it

The receipt is laid out as an **80mm till roll** — the width of a counter printer — and prints straight to one. On A4 it centres the same narrow column rather than stretching the figures across a page nobody can read.

Print / Save PDF does both jobs: your printer, or a PDF you can send to the client on WhatsApp.

> **It is a page, not a pop-up.** That is deliberate — a receipt has to survive being printed, saved and forwarded, and none of that works on something that only exists inside another screen. Every receipt opened is written to the activity log.

> **Stylists cannot print receipts.** The receipt lives behind the same permission as the appointments list, which stylists do not have. Receipts are the counter's job — owner, manager or receptionist.

CHAPTER FIVE

Clients

Everyone who has ever sat in a chair, and everything you know about them.

Searching

One box searches name, phone and email together. Partial matches count, so "6 78" finds every client whose number contains it.

Adding someone at the counter

Name and **phone** are required; email is optional. The notes field is the valuable one — allergies, a sensitive scalp, preferred times. Write what the next stylist would want to know, because they will read it before the client sits down.

> **There is no delete button here, on purpose.** A client's history is attached to every appointment they ever had, so removing the person would quietly change last year's revenue. Correct the record instead; if someone must go, that is a job for the database, not a button anyone can press on a busy Saturday.

CHAPTER SIX

Services

The catalogue. What appears here is what a client can book online.

What each service carries

Name and description	Exactly as the client will read it on the website.
Category	Hair · Braids · Nails · Facials & Lashes · Massage & Spa.
Price	In FCFA. This is what the client pays.
Duration	In minutes — the single most important field, see below.
Popular	Flags it on the public site.
Visible	Turn a service off without deleting its history.

> **Duration is what protects the day.** The booking system blocks the stylist's chair for the full length of the service, which is why nobody gets double-booked. If you set four hours of braiding to sixty minutes, the diary will cheerfully sell the same afternoon three times over.

Products a service consumes

A service can be linked to the products it uses up. That link is what makes stock deduct itself when the appointment is completed. Set it once, and inventory keeps itself honest.

CHAPTER SEVEN

Staff

The people and their craft — separate from their logins.

A staff record holds

- Name, job title and the biography shown on the public Stylists page.
- Phone number and working hours as displayed to clients.
- **Commission %** — see chapter nine for how it is calculated.
- Rating and review count, shown on the public site.
- **Which categories they may be booked for.** A braider is not offered for a pedicure.
- **Public** — whether they appear on the website at all.

> **Giving someone a chair does not give them a login.** Create the staff record here; create the account on the Users page and link the two. A stylist can work for months without ever signing in.

CHAPTER EIGHT

Inventory & the counter

Products, stock movements, and selling things over the counter.

The four numbers at the top

- **Products tracked**, and how many of them are also sold at the counter.
- **Stock value at cost** across every category.
- **Low / out of stock** — anything at or under its reorder level.
- **Retail this month** — counter takings and the number of sales.

Recording a restock

1. Press **Record restock** and pick the product.
2. Enter the quantity received and the unit cost.
3. Add the purchase order reference if you have one.
4. Leave **log as expense** ticked so the money spent reaches net profit.

> **Tick the expense box.** If you skip it, the stock arrives but the money never leaves the books, and your net profit for the month will be flattering and wrong.

Selling at the counter

Build the basket, choose the payment method, and take the money. The sale and the stock deduction happen in one transaction — takings and inventory cannot end up disagreeing with each other, even if something fails halfway.

> **The till will not let you oversell.** If you try to sell four of something when three are on the shelf, the whole sale is refused with "*Only 3 left of …*" and nothing is recorded. Count the shelf, correct the stock, then sell.

Where stock moves come from

In	A restock you recorded.
Sale	Sold over the counter.
Out	Consumed by a completed appointment, noted with the service that used it.

CHAPTER NINE

Revenue & reports

What the salon actually made. Owner and manager only.

Choosing a period

Today · this week · this month · last month · this year · or a custom range with your own two dates. Everything on the page — every figure, chart and export — obeys the period you pick.

The four headline figures

Gross revenue	Services plus retail, for the period.
Total expenses	Everything logged on the Expenses page in that period.
Net profit	Gross minus expenses. The **Profit calculation** card shows the working.
Outstanding / unpaid	Work done and not yet paid for.

The breakdowns

- **Revenue against expenses** — the two lines together over time.
- **Revenue by service category** — where the money comes from.
- **Payment methods** — how much cash, MoMo, Orange and card.
- **Revenue by stylist & commission due** — per person: appointments, revenue generated, their rate, commission owed, and what the salon keeps.
- **Outstanding appointments** — the chase list, with phone numbers.

Exports

Every card has an **Export** button. Five reports are available — summary, by category, commission, outstanding, and a full appointment list. Each downloads as a CSV named for the report and the dates it covers, for example `pbs-commission-2026-09-01-to-2026-09-30.csv`

> **The files open cleanly in Excel.** Accented names — Aïcha, Yaoundé — come through correctly rather than as mojibake, because the export marks its encoding.

How commission is worked out

Each stylist has a rate; the default for new staff is set under **Settings** → **Tax & commission**. The basis decides what the percentage applies to — out of the box it is **service revenue only**, so retail sales and tips do not inflate what the salon owes.

CHAPTER TEN

Expenses

Everything the salon spends. Without this page, net profit is fiction.

Logging one

1. Choose a **category** — rent, restock, salaries, utilities and so on.
2. Write a **description** someone will still understand in six months: "ENEO electricity — September" beats "bill".
3. Enter the **amount** and the **date it was spent**, not the date you typed it.
4. Mark it **recurring** if it comes every month.

What the page shows you

- Total logged in the period, and the largest category.
- Fixed and recurring costs, separated out.
- Net profit, so the consequence of what you just typed is on the same screen.
- **Expenses by month** and **Where it goes** as charts.

> **Restocks logged from the inventory page land here automatically.** Do not type them again — you would be paying your supplier twice on paper.

CHAPTER ELEVEN

Users & access

Who may sign in, and as what. Owner only.

Creating an account

1. Enter the person's name and email. The email must be unique — the system refuses a duplicate rather than creating a second account nobody can tell apart.
2. Pick the **role**. Consult chapter two first.
3. If they work a chair, link them to their **staff record**. This is what makes "my schedule" mean anything.
4. Turn on two-factor if you want it for that person.

Suspending and restoring

Suspending is the humane opposite of deleting: the account stops working immediately — mid-session, on their next click — and everything they have ever done stays intact and attributed. The same button restores them.

Resetting a password

Reset password generates a temporary one and shows it to you once, on screen. Write it down or send it before you navigate away. The account is set to active at the same time, so it also works for someone who was never able to get in.

> **The last owner cannot be demoted.** Try it and you are told "*This is the only owner account — change someone else to Owner first.*" Nobody can lock the salon out of its own system with one careless click.

The rest of the page

- **What each role can reach** — the live permission matrix, generated from the real rules rather than typed by hand.
- **Activity log** — who did what and when. Every status change, payment, restock, login and refused page appears here.

CHAPTER TWELVE

Settings

Six tabs. Owner only. Everything you change here is live on the public website the moment you save.

Salon info

Name, tagline, address, phone, WhatsApp number, email, and the Instagram, TikTok and Facebook handles. These feed the header, the footer and the contact page.

Business hours

Opening and closing time for each day, and which days you are closed. The booking system will not offer a slot outside these hours.

Branding

The three brand colours — black, gold and pink — plus the logo and favicon. Changing a colour here restyles the public site.

Payments

Which methods you accept at the chair, and whether online Mobile Money collection is switched on. There are three honest states:

Off	Nothing is charged online. Clients settle at the salon. This is the shipped setting and a perfectly good place to stay.
On, no keys	The salon says it takes deposits but no provider is connected yet. The site says so plainly rather than failing at the last step.
Live	MTN MoMo or Orange Money credentials are in place and deposits are really collected.

Booking rules

Booking window	How far ahead clients may book. Ships at **21 days**.
Minimum notice	How close to the hour a slot can still be taken. Ships at **2 hours**.
Free cancellation	Hours before the slot. Ships at **4 hours**.
Slot interval	The spacing of offered times. Ships at **30 minutes**.
Buffer	Breathing room added after each appointment. Ships at **10 minutes**.
Deposit	**30%**, required above **20,000 FCFA**.

Tax & commission

The tax rate — **0%** as shipped — and the default commission percentage for new staff, **35%**, together with the basis it applies to.

CHAPTER THIRTEEN

Notifications

The things asking for your attention, gathered in one place.

- **Pending bookings** waiting to be confirmed.
- **No-shows** that may need following up.
- **Low stock** — anything at or below its reorder level.
- **Unread messages** from the public contact form.

Messages sent through the website's contact form land at the foot of this page, unread ones first. Owners and managers see them.

A stylist opening this page sees only alerts about their own chair.

CHAPTER FOURTEEN

My Profile

Your own account. Everyone has this page, whatever their role.

- **Personal details** — your name and email.
- **Security** — change your password. You must type the current one first, and the new one must be at least eight characters and typed twice.
- **Account** — your role, when you last signed in, and whether two-factor is on.
- **What you can reach** — a plain list of your own permissions, so nobody has to guess why a menu item is missing.

> **Everyone should change their password on first sign-in.** The seeded `demo1234` is public knowledge — it is printed in this manual.

CHAPTER FIFTEEN

The stylist portal

What a stylist sees when they sign in. Three pages, all scoped to them.

My Schedule

Today's chair hour by hour, a month grid to look ahead, and their own working hours. Nobody else's bookings appear.

My Clients

Everyone they personally have served, searchable. Not the salon's client list — theirs.

My Performance

- Revenue by month, for their own work.
- Commission breakdown — what they have earned.
- What they spend their time on, by service.
- Recent reviews, in the client's own words.

> **This is deliberately generous.** A stylist can see exactly what they earned and why, without being able to see the salon's costs, other people's takings, or anything about staff and settings.

CHAPTER SIXTEEN

Photos & the gallery

The public gallery is driven by folders on disk, not by an upload form.

How it works

The database stores only a folder and a filename — never a picture. The folder a photo sits in is what decides which filter chip it appears under, and which service it books into.

FOLDER	APPEARS AS	BOOKS INTO
`hair-styles/`	Braids & Styles	Braids & Plating
`haircut/`	Cuts & Styling	Hair Cuts & Styling
`makeup/`	Makeup	— not yet sellable
`manicure/`	Manicure	Nails & Nail Art
`pedicure/`	Pedicure	Nails & Nail Art
`lashes/`	Lashes & Brows	Facials & Lashes
`massage/`	Massage & Spa	Massage & Spa
`backgrounds/`	never shown as a tile	section artwork only
`team/`	stylist portraits	named `ST-01.jpeg` …

Publishing a photo

1. Drop the file into `assets/img/<folder>/`
2. Run `npm run images`

That is the whole job. The scanner adds the new files, removes rows whose file has gone, and leaves everything else alone. Run it as often as you like.

Naming

Lower case, no spaces. A descriptive name becomes the caption on the tile — `smoky-makeup.jpeg` shows as **Smoky Makeup**. A name that says nothing, like `p1.jpeg`, falls back to the folder's label and position: **Pedicure 03**.

> **A missing file is never a broken image.** Any photo slot with no file behind it falls back to the gradient tile the site shipped with, which is why a half-filled folder never breaks a page. The stylist cards show initials on gold and pink until portraits are added to `team/`.

CHAPTER SEVENTEEN

Daily, weekly, monthly

If you do nothing else, do these.

Every morning

1. Open the dashboard and read today's appointments.
2. Confirm anything still sitting at **pending**.
3. Glance at low stock — it is the only thing you cannot fix later in the day.

Through the day

1. Mark each appointment **completed** as the work finishes, not in a batch at closing — completing is what deducts stock.
2. Take payment at the chair and record the method, add-ons and tip.
3. Record counter sales as they happen.

Every week

1. Filter appointments by **unpaid** and chase what is owed.
2. Log the week's expenses while you still remember what they were for.
3. Record restocks, with the expense box ticked.

Every month

1. Set the revenue period to **last month** and read net profit.
2. Export the **commission** report and pay the team from it.
3. Export the **outstanding** report and decide what to write off.
4. Review stock value and the reorder levels that keep tripping.

CHAPTER EIGHTEEN

When something looks wrong

WHAT YOU SEE	WHAT IT MEANS
"This account is suspended."	The owner suspended it. Users → find them → restore.
Too many attempts, locked out	Five wrong passwords from this computer. Wait 15 minutes; a correct login clears it.
You keep landing on the dashboard	Your role cannot reach that page. Check My Profile → what you can reach.
"It cannot be completed before it happens."	The appointment is dated in the future. Fix the date or wait for the day.
A completed booking will not reopen	By design. Reverse the payment instead.
"Only 3 left of …"	The counter refuses to oversell. Count the shelf and correct the stock.
Net profit looks too good	Expenses are missing — most often restocks logged without the expense box ticked.
A stylist is never offered for a service	Their staff record is not linked to that category.
The diary double-books	A service duration is too short. Services → check the minutes.
The list is not in the order you expect	Check the **Order by** chips above the table — the choice sticks as you filter and page.
The receipt did not open after payment	The browser blocked the new tab. Allow pop-ups for the site, or press **Receipt** on the row.
A stylist cannot find the receipt button	Correct — receipts sit behind the appointments permission. That is the counter's job.
A new photo does not appear	The scanner has not run. `npm run images`
A gradient tile where a photo should be	The file was moved or renamed. Run the scanner again.

> **Before going live, three things.** Change every seeded password. Remove the demo-accounts list from the login screen. Decide whether online deposits are on, and if they are, put real provider keys in place.
